
Familiarize yourself with phishing attacks <HR & Marketing Teams>

What is Phishing?

Phishing is a type of online scam where someone tries to trick you into giving away your personal information—like your password, bank details, or OTP—by pretending to be someone you trust.

Simple Explanation (Layman Style)

Imagine someone calls you pretending to be your bank and says:

“Your account has a problem. Please tell me your PIN to fix it.”

If you believe them and share your PIN, they can steal your money. That's exactly what phishing is—but it usually happens through emails, text messages, or fake websites.

Why it's called “Phishing”

Scammers are like fishermen:

They throw bait (fake messages)

They wait for someone to bite (trust them)

Then they steal information

Common Examples

A message saying: *“Your bank account will be blocked. Click here to verify now.”*

An email that looks like it's from PayPal or GTBank asking you to log in

A fake website that looks exactly like your bank's website

WhatsApp messages promising free giveaways but asking you to “log in”

Learn to spot phishing emails

Urgent duty External Inbox

Pretend Person <ceo123812@email.com>
10 mins

Are you available?

I have a request for you to handle immediately. Kindly confirm your availability. Keep a close update.

Regards
Sent from my Verizon 4g LTE

Annotations:

- Urgent duty: Email is requesting an action with urgency
- Pretend Person: Phishing emails will pretend to be someone. However, will often use an incorrect email address
- Are you available?: No first name personalization & poor grammar
- Sent from my Verizon 4g LTE: No sign-off/signature

Always be cautious - they can be as sophisticated as this...

Signs of Phishing

Urgent messages (“Act now or lose your account!”)

Strange links or misspelled website names

Requests for sensitive info (PIN, password, OTP)

Messages from unknown or suspicious numbers/emails

How to Protect Yourself

Never share your password, PIN, or OTP
Don't click suspicious links.
Always check the real website URL
If unsure, contact the company directly
(not through the message).

Simple Rule to Remember

If it feels urgent and asks for your personal info — STOP and think.
If you want, I can show you real phishing examples in Nigeria and how to spot them instantly.
